                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                      Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           wariable region is directed against leakocyte adhesion molecule VLA-4. Cloned cDNA sequences of mouse 21.6 to Land VII (AM09989) and M099892) regions are linked to human constant regions in the construction of a humanized antibody against VLA-4. The 5 and 3 construction of a humanized antibody against VLA-4. The 5 and 3 constanting human kappa or gamma-1 constant regions. In the humanized AM099995-99 and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized Light chain, amino acids L45, L49, L58 and L69 in the humanized Clipht chain, amino acids L45, L49, L58 and L69 in the humanized Clipht chain, amino acids L45, L49, L58 and L69 in the humanized Clipht chain amino acid present in the equivalent constitution of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric position of the mouse 21.6 Ig L chain. Plasmids encoding the chimeric cantibodies are transfected into COS cells. The humanized antibodies can cell and for treating inflammatory diseases such as multiple cell and for treating inflammatory diseases such as multiple cells of cerebral tranmas, meningits or encephalitis. The antibodies can can be used for detecting VLA-4, for affinity purification or for cenerating anti-inflamens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

of appropriate fragments of mouse and human DNA sequences. The humanised 21.6 VL and a humanised 21.6 VL (see AAV22413) can be used to produce a claimed humanised 21.6 antibody that is useful in the camentacture of a medicament for treating asthma, atherosclerosis, 20 AIDS, dementia, diabetes, inclammatory bowel disease, rhemmatod at arthritis, transplant rejection, graft versus host disease, unwour metastasis, nephritis, atopic dermatitis, psoriasis, myocardial ischaemia, and acute leukocyte mediated lung injury. The antibody may also be used in the affinity purification of alpha 4 integrin to use as vaccine or an immunogen. It is also useful for cor generating idiotypic antibodies. The humanised antibody has a confine the human circulation essentially equivalent to that the first in the human circulation essentially equivalent to that the confine the human circulation essentially equivalent to that the confine the human circulation essentially equivalent to that the confine the human circulation essentially equivalent to that the confine the human circulation essentially equivalent to that the confine the human circulation essentially equivalent to that the confine the human circulation essentially equivalent to the confine the human circulation essentially equivalent to the confine the human circulation essentially equivalent to the confine the human circulation essentially equivalent to the confine the human circulation essentially equivalent to the confine the human circulation essentially equivalent to the confine the human circulation essentially equivalent to the confine the humanise essentially equivalent to the confine the human circulation essentially equivalent to the confine the humanise essentially equivalent to that the confine the humanise essentially equivalent to the confine the humanise essentially equivalent to the confine the humanise essentially equivalent to the confine the humanise essentially equivalent to the confine the humanise essentially equivalent essentially equivalent essentiall
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This polypeptide, designated La, comprises the light chain variable region (VI) of a humanised alpha-d integrin antibody 21.6. It is composed of complementarity determining regions (CDRs) from the VL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21.6 and a modified human REI framework. It can be expressed in mammalian host cells following PCR amplification and mutagenesis

Cloned cDNA CDR sequences of mouse 21.6 variable light and variable heavy regions are linked to human constant framework regions of the REI antibody for the light chain and the 2*CL antibody for the heavy chân in the construction of a humanized antibody against VLA-4. The 5' and 3' ends of the mouse CDNAs are modified using PCR primers (See AAQ99895-98) and then subcloned into mammalian cell expression vectors containing human kappa or gamma-1 constant regions. In the humanized light chain, amino acids L45, L49, L58 and L59 in the human kappa LCWR framework are replaced by the anino acid present in the equivalent position of the mouse 21.6 ig light chain. Plasmids encoding the chimeric antibodies are transfected into COS cells. The humanized antibodies can be used to inhibit adhesion of a context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context of the context

The sequence represents the mouse antibody 21.6 light chain variable cregion directed against leukocyte adhesion molecule VIA-4. Cloned CC Linke sequences of mouse 21.6 VL and VI (see ANQ9892) regions are callibed against VIA-4. The 5' and 3' ends of the mouse clNAs are constant regions in the construction of a humanized cantibody against VIA-4. The 5' and 3' ends of the mouse clNAs are constant regions. In the humanized light chain, amino acids LA5. C constant regions. In the humanized light chain, amino acids LA5. C constant regions. In the humanized light chain, amino acids LA5. C constant regions. In the humanized light chain, amino acids LA5. C constant regions. In the humanized light chain, ento acids LA5. C constant regions. The humanized light chain, ento acids LA5. C constant regions to the humanized light chain, ento acids LA5. C constant regions to the humanized light chain. Per accordance to the first chain, amino acid present in the equivalent position of the mouse c transfected into COS cells. The humanized antibodies can be used c to transfected into COS cells. The humanized antibodies can be used con also be used in the treatment of stroke, cerebral traumas, meningitis or encephalitis. The antibodies can also be used for meningitis or encephalitis. The antibodies can also be used for meningitis or encephalitis. The antibodies can also be used for the treatment of the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remarks and the constant remark
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Fig 1; 105pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Humanized antibody; leukocyte adhesion molecule; VLA-4; therapeutic
detecting VLA-4, for affinity purification or for generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New humanised antibodies against VLA-4 - used for inhibiting leukocyte adhesion to endothelial cells, partic. for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (ATHE-) ATHENA NEUROSCIENCES INC

The sequence represents the human reshaped antibody 2.6 (19ht chain variable region against leukocyte adhesion molecule VIA-4. Cloned cDNA sequences of mouse 21.6 VI (AAQ99889) and VH (AAQ99892) regions are linked to human constant regions in the construction regions are linked to human constant regions in the construction of a humanized antibody against VIA-4. The 5 and 3 rends of the mouse cDNAs are modified using PCR primers (See AAQ99895-98) and

CE The present invention describes fusion proteins comprising a chemokine CC and a tumour antigen or HIV antigen. Specifically claimed fusion proteins comprise. (1) human monocyte chemokactic protein 3 (MCP-3) and human CC (2) human interferon induced protein 10 (MP-10) and human MCC-1; (3) human macrophage derived chemokine (MDC) and human MCC-1; (4) human SDP-1 and HIV gp120; (7) human MCC-11; (1) human IP-10 and HIV gp120; (6) human MCP-3 and FIV gp120; (7) human MCC-11; (1) human IP-10 and HIV gp120; (7) human MCP-3 and HIV gp120; and (8) human SDP-1 and HIV gp120; (7) human MCP-3 and molecular and sequences encoding them, can be used for producing an immune response, e.g., an effector T cell immune response. They can also be used for treating cancer or treating or response. They can also be used for treating cancer or treating or response. They can also be used for treating cancer or treating or response. They can also be used for treating cancer or treating or consistent of the sequences of the used in in vitro diagnostic assays, as well as in screening assays can the sequence of the constraint of the mapping of the present sequence in the protein antigen epilopes. The present sequence represents a fusion protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and a timout antigen or HIV antigen. Specifically claimed fitsol proteins comprise: (1) human monocyte chemotractic protein 3 (MPP-3) and human Muc-1; (2) human interferon-induced protein 10 (IP-10) and human Muc-3; (3) human macrophage-derived chemotine (MDC) and human Muc-1; (4) human MCP-3 and HIV gp120; (6) human MCP-3 and HIV gp120; (7) human MCP-3 and HIV gp120; (7) human MCP-3 and HIV gp120; (6) human SP-1; and HIV gp120; (7) human MCP-3 and HIV gp120; (7) human MCP-3 and HIV gp120; (7) human MCP-3 and HIV gp120; and (8) human SP-1; and HIV gp120; The fixton proteins and nuclectide sequences encoding them, can response. They can also be used for treating cancer or treating or revening HIV infection. The fixton proteins and/or nucleotide sequences can be used in In vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and inc mapping of tumour antigen epitopes. The present sequence represents a fusion protein
                                                                                                                                                                                                                                                                                                                                          immune response; HIV; infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAY29916 standard; Protein; 374 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

HIV 9p120. The fusion proteins, and nucleotide sequences encoding them, can be used for producing an immune response, e.g. an effector T cell immune response. They can also be used for treating cancer on treating or preventing HIV infection. The fusion proteins and/or nucleotide sequences can be used in in vitro diagnostic assays, as well as in screening assays for identifying unknown tumour antigen epitopes and fine mapping of tumour antigen epitopes. ANY3916 and ANZ21156 to ANZ21168 are sequences given in the SEO 10 LISTING in the present invention but which are not mentioned further within the specification.
                                                                                                                                                                                                                                                                      Muc-1: (3) human macrophage-derived chemokine (MDC) and human Muc-1: (4) human SDP-1 and human flucti: (5) human in Flore and human flucti: (5) human in Flore and HIV spl20; (6) human SDP-1 and HIV spl20; (7) human MDC and HIV spl20; and (8) human SDP-1 and
                                                                                                                                                                                                                                                                                                                                                         and a tumour antigen or HIV antigen. Specifically chained fusion proteins comprise: (1) human moroyte chemotactic protein 3 (MCP-3) and human Muc-1; (2) human interferon induced protein 0 (IP-10) and human.
                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes fusion proteins comprising a chemokine

```
This is an example of a CDR-grafted light chain of the invention. The constant regions are based on sequences of the knman kappa constant domain, the signal sequence is derived from murine MAD 1872. 3 and the CDR sequences are based on the murine OKT4A light chain CDRs. The recombinant antibody encoded by this sequence has affinity for CD4 similar to that of OKT4A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New CD4 specific recombinant - complementarity determining region grafted antibody for treating graft rejection and T cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC covalent compound which was covalently bound to keyhole limpet CC hemocyanin (Kih). Eight hybridomas (IFIO, A10, ICI), 564, 2368, 205, 2368 and 388) were producing what that were strongly positive compound and also were producing what that were strongly positive compound and also were producing what that were strongly positive against glutathone eliminate gualitations mercuric ions law was isolated from bybridoma cells with compound to the primer strand chan synthesis was catalysed were complementary to the 5 and of the CH1 domain of the heavy the primer was for chan synthesis can be presented by the physidoma of interest, or to the 5 and of the CH1 domain of the strand of the Chappa domain. Some of the primers used for cDMA synthesis of the C shown in A097511-097518. The primers used for cDMA synthesis of the C shown in A097511-097518 in the primer sued for cDMA synthesis of the C the primer of a particular antibody polypepide was also used for PCR amplified without the strand compounction with the complement of the primer. In addition, the VH primer AA097518 compounded to amplify the mah 205 and 556 heavy chains. The sequences of the PCR amplified mucleotides were determined. These are given to A0979198971. The descriptions of the SEO to nos given on pp 44-45 and in the claims are different from the descriptions in the second of the claims are different from the descriptions in the second of the claims are different from the descriptions in the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of the second of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ouery Match

The antibody recognises the beta I subunit (D29) of Integrins and Inhibits activation and proliferation of peripheral T cells induced by anti-CD3 antibodies, Monoclonal antibody K20 is a preferred target for humanisation; the humanised version may be useful as an other section of the humanisation process, the complementarity determining regions (CDBs) of a human antibody with framework regions 70.95% homologous to those of K20 were replaced by the K20

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                       481

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   488.5
